

2st Annual Spring Airheads Tech Day.....St Augustine, FL

About 34 attended our Second Annual BMWNEF sponsored Airheads Tech Session on Saturday February 23th at the home of Allan and Connie Moskowitz in St. Augustine. Riders started showing up and 9AM and all were gone by 5pm. Florida Air Marshall Gator Balough was there along with Airhead Tech guru Kevin Reimer. Also, Bob Messer was there to head organize things and keep wrenches out of Gator's hands. Kevin came from Tallahassee where he holds the largest Airhead Tech Session in the State each year in mid April. Others came from Dunnellon, Daytona, Naples, Orlando and one hearty soul from Ontario down early for Bikeweek. One special guest was Bill Warnick, Parts Manager of Daytona BMW. Bill used a rare Saturday off to come up and join us. One project started out as a replacement of steering head bearings which uncovered 2 bent fork legs. With no spare fork legs about, the bearings were replaced and carefully reassembled. Imagine the odds of this bike going back together as it had been so the rider could get home. Lot's of clutches and carbs were adjusted. Thanks to our own Darrin Green, my big project of removing the motor from my GSPD project was completed successfully. While this was going on another Club member was rebuilding the carbs for this bike. Big THANKS to Randy Summers and Darrin for all their assistance. Lot's of other assessments and questions floated around the various groups hanging out on a beautiful Florida Saturday. We fired up the grill, thanks to Javier Castro, and cooked up many a burger and brat for lunch. Many thanks to Allan and Connie for being our hosts this year and maybe next ?

The following day a number of the attendees joined Gator, Kevin and Bob to help set up tents for the B-Cubed Bikeweek event at the Holiday RV Park north of Daytona. Thanks for helping out.
